Anacouda Company

The work of pumping out the Anacenda mine is going on rapidly, and I was informed on Monday, when the shift changed that evening, that the water in the Anaconda shaft was 25 feet above the 800, and that they did not anticipate much further trouble on account of the copper in the water. It was found that the steel tanks were rapidly attacked by the copper in the water, and resort has been had to lining them with wood, and coating the outside thickly with tar. The guides in the shaft have been attacked, and they have constantly to be repaired. The water hoisted in the tanks is often muddy, and looks as it the ground around was caving into it. Probably the splash of the descending tank creates small ripples that tend to bring down any leose ground. It is and it should be thought which is possible that the company may find it best to have one or two specially constructed numps made that will resist the action of the water, and use copper Therefore, the thought can not help column pipes. The company seems being sincere; it must reflect the very very well satisfied with its refining truth, as the mind of the utterer has tanks it erected at the smelter in Anaconda. They were erected more as an oration has ever been delivered which experiment than anything else. The did not spring from the heart of him cost of putting in sufficient tanks to who spoke it. treat 12 tons of matte daily has been over \$100,000. Internall on Grafary

"There is no such thing as an extemperaneous address. Of course, I mean by that an address which is dignified, worthy of the occasion, and which commands attention and respect. There never was and there never will be an impremptu speech. Of course, I know that some men have delivered speeches which have attracted wide attention and which are reported to have been inspired on the moment. But in the nature of things this is impossible; if you analyze a great speech and consider what is necessary to make one, it is easy to see that such a thing as impromptu oratory is impossible. Now, a speech which is true oratory must in the first place suggest sublime, deep and eternal truths. There must be thought capable of producing correspondingly great emotion and sentiment in the minds of those who hear it spoken. conceived it; and so no really great "Sometimes the thought is develsaid exquisite, labor and turmoil of
